EDUCATION

UC Berkeley, Haas School of Business Ph.D. Finance	2023-present
Western Michigan University M. A. Applied Economics (Statistics and Econometrics), with Distinction	2021-2023
Baum Tenpers Research Institute, Lagos, Nigeria Certificate Diploma in Mathematics, with Distinction	2020-2022
Crescent University Abeokuta B.Sc. Economics with Operations Research (First Class Honors)	2014-2018

RESEARCH INTERESTS

International macro-finance, Financial Intermediation, Corporate Finance, Climate Finance

RESEARCH

1. Shadow Credit and Firm Performance (*Work-in-progress*)

Short Abstract: I investigate how reliance on shadow (non-bank) lenders shapes firm outcomes after borrowing. Using the 2013–14 leveraged-lending guidance as a plausibly exogenous shift that constrained banks but not nonbanks, I plan to assemble a loan–firm panel (Dealscan–Compustat), identify firms that reallocate toward nonbanks, and compare them to matched bank-financed peers via difference-in-differences and event-study designs.

2. Connectedness of G10 Cross-Currency Basis Derivatives Markets (with Komla Agudze, Favour Olarewaju, & Chikaodinaka Iwuagwu), *The Journal of Investing*, 34 (1) 58 - 82, 2024.

Short Abstract: The paper examines interconnectedness across G10 cross-currency basis swap markets using the Diebold–Yilmaz framework to identify shock transmitters and recipients. The EUR/USD basis emerges as the dominant net giver and least recipient of shocks, highlighting the EUR basis as the critical market to watch when hedging FX exposures with cross-currency swaps.

3. Dynamic Spillovers Among Dirty Energy Market and Stocks of Leading Emitters of Carbon: Evidence from the Novel Quantile Time-Frequency Approach (with Johnson A. Oliyide, Sodiq A. Oladipupo, Oluwafemi David Ogunjemilua, & Fisayo Ajayi), 2024. (*Working Paper*)

Short Abstract: Applying quantile time–frequency connectedness (Chatziantoniou et al., 2022) integrating Diebold–Yilmaz time and Barunik–Křehlík frequency tools, we study spillovers among crude oil, natural gas, and US/China/Japan/India equities (daily, 2010–2023). Results show short-term, tail-state risks dominate; the US is the leading transmitter, Japan the main receiver, oil and gas are net receivers, with dynamics shifting across quantiles, frequencies, and crisis periods (e.g., COVID-19).

4. A New Testable Theory on Deviations from Covered Interest Rate Parity, 2022. (*Working Paper*)

Short Abstract: I develop an approximate closed-form model linking covered-interest-parity deviations (the cross-currency basis) to three drivers: credit-spread differentials, technology/output differences, and inflation gaps. A simple empirical exercise supports the theory and highlights actionable implications for fixed-income and FX-derivatives arbitrage via cross-currency swaps.

5. Extended Market Drivers of CIP Deviations in Korea's Cross-Currency Swap Markets (with Olarewaju, F. O.), *Asian Review of Financial Research*, Vol. 33 No. 4 pp.541-580, 2020.

Short Abstract: This paper studies the 1- and 5-year KRW cross-currency basis across four periods (pre-GFC, GFC, eurozone crisis, post-crisis) from 2003–2019. Linear regressions with ARMA errors and VAR variance decompositions show CDS, stock returns, and Libor–OIS were the strongest GFC drivers; across the full sample most indicators are significant, while oil has the weakest impact.

RESEARCH EXPERIENCE

Haas School of Business, UC Berkeley Graduate Student Researcher for Dr. Matilde Bombardini	2025
Department of Economics, UC Berkeley Graduate Student Researcher for Dr. Joseph Shapiro, Dr. Andres Rodriguez-clare	2024
Department of Economics, Western Michigan University Research Assistant for Dr. Michael Ryan	2022
Baum Tenpers Economics and Finance Research Group Research Assistant for Dr. Komla Agudze, Dr. Oyakhilome Ibhagui, Dr. Kagba Kouse	2020-2023

TEACHING EXPERIENCE

Department of Economics, UC Berkeley Money and Banking (ECON 165, Fall 2025)	2025-present
Department of Economics, Western Michigan University Exploring Economic Data (ECON 3390, Fall 2021), Econometrics (ECON 4090, Spring 2022), Economics Statistics (ECON 6220, Fall 2022)	2021-2023

CONFERENCES AND WORKSHOPS

NBER Entrepreneurship Research Boot Camp, July 14-18, 2025.
International Conference on Empirical Economics, Penn State University, 2023 (Presented).
Clausen Center Conference on Global Economic Issues: Deglobalization and Fragmentation, UC Berkeley, 2023.

AWARDS AND FELLOWSHIPS

Clausen Center Research Assistant Fellowship, UC Berkeley	2024-2025
The Minder Cheng PhD Fellowship Endowment Fund, UC Berkeley	2023-2024
Research In Color First Year Fellowship (\$2500)	2024
Research In Color Graduate School Application Fellowship (\$1000)	2023

Departmental Harik Award for the Best M.A. Student, WMU	2022
Published Paper Award by the Korean Finance Association (KFA) (\$2,340)	2020
Best Graduating Student, Department of Economics, Crescent University	2018

SKILLS & LANGUAGES

Programming: Python, R, MATLAB, L^AT_EX, EViews, Stata

Languages: English (Native), Yoruba (Native), Arabic (Elementary)
